Built for crops facing **salt and high-pH** stress

UNLOCKS NUTRIENTS, EVEN IN CHALLENGING SOILS.

Salt stress

Excess salts reduce water and nutrient uptake, limiting growth and yield.

High-pH / calcareous soils

Lime-rich soils can reduce the availability of essential nutrients.

THE SOLUTION

PlantiPower ALL12® improves nutrient transport and availability in the plant, even under challenging salt conditions.

THE RESULTS

-42%	**-46%**	**+30%**	**11→86%**	**48→94%**
Sodium (in young leaf sap)	**Chloride** (in young leaf sap)	**Calcium** (in leaf sap)	**Phosphorus** (uptake efficiency)	**Silicon** (uptake efficiency)

Measured in cucumber crops at Van Gog, the Netherlands.

Analysed by eurofins
